Techspray Introduces Bath Analysis Kit for Inline & Batch Cleaners

Amarillo, TX – Techspray now offers the Techspray Renew Bath Analysis Kit (part #1590-KIT) for use with Eco-dFluxer SMT100 (1550) and Eco-Stencil AQ (1572) water-based inline and batch cleaners.

This kit tests the concentration and loading of a batch solution. A testing protocol keeps the cleaning process from drifting, with either concentration levels dropping, or the bath becoming so loaded with flux residues that it no longer functions properly.

Although the kit looks like a chemistry set with test solutions, flask, graduated cylinder, etc., it actually has easy-to-follow instructions for non-technical operators.

Doug Ngai, Product Manager of Process Chemicals, stated: "Techspray is committed to not only providing the best inline and batch cleaners on the market, but also to help customers maintain their cleaning processes."

Eco-dFluxer SMT100 is a water-based, environmentally friendly defluxer for use in both inline and batch cleaning equipment. Solvents and saponifiers lower surface tension for penetration under low stand-offs, and powerful cleaning action removes all flux residues.

Eco-Stencil AQ (part #1572) is an economical, yet powerful batch stencil cleaner. This water-based cleaner uses the latest environmentally friendly surfactants to break down pastes and adhesives.

Techspray, a division of Illinois Tool Works (ITW), is a leading manufacturer of chemical products for the electronics industry. Techspray formulates, blends, and packages a wide variety of chemicals and assorted support products for the electronics industry, heavy industry, and plant and equipment maintenance including degreasers, defluxers, conformal coating, dusters and water-based cleaners.
